The KEYMACRO key macro includes a visual code editor, the capability to create and edit your own key macros and attach to any tool palette, in addition to the ability to share and reuse macros created by other users. The visual code editor is clean and intuitive and offers a comprehensive set of key macro operations. You can create simple macros with single key strokes, or extend them to suit your needs, using a variety of key macro operators and special features. To attach the macro to a tool palette, simply drag and drop it where you want it, and you can apply as many key macros as you want to your tool palettes. The macro editor includes additional features such as an outline view, an XML export, and the ability to share the macros you create with other users. The developer has implemented sophisticated key macro record and playback functions that enable you to reuse key macros created by others, customize any of the existing macros, and capture a key macro you need, even if you don't know how to write it yourself. Macros can be saved in the format of XML, HTML, HTML, or the proprietary VPP, or saved in the standard MACROBUF format for use with any Windows programs.
