» .1. Field of the
Invention The present
invention relates to a
sensor comprising a
number of thin film
modules in which a
number of different

semiconductor chips
are arranged on a
substrate, each
semiconductor chip
being in connection to a
terminal, and two of the
semiconductor chips
being in connection to a
bridging resistor. 2.

Description of the
Related Art Such
sensors are used in

many fields, for example, in the medicine sector, to detect the concentration of substances (for example, blood glucose level, cholesterol level, etc.) or other parameters, and also in the field of motor vehicle control. A

particularly high level of reliability is of course required in connection with the abovementioned sensors. For this reason, safety has been considered in all sensors. To this end, one parameter has hitherto been used, for example, the

temperature, the current consumption or the operating voltage. For example, sensors have been known in which the measuring result changes when the operating voltage drops below a predetermined limit.Q: How to interact with the ruby Date object? I

have a date variable
that is filled in the
following manner: `date`
`= Time.parse('-0' +`
`time)` The variable `date`
is populated with the
following values: `date =`
`Time.parse('-0 8:59:51`
`PM')` => Wed May 20
08:59:51 -0700 2012
This is how I'm using it
in my code: `next_date`

= Date.new(year,
month, day) next_date
+= 1.day However, if I
check the value, like so:
puts next_date.inspect
